#### SERIAL SEQUENTIAL STIMULATION

The "3S" program list includes 18 parameter combinations. The "3S" programs are characterized by a delay activation of the channels 3 and 4 compared with the channels 1 and 2. The Serial Sequential Stimulation permits to stimulate the musculature in kinetic chain thanks to the differentiated activation times of the muscular groups involved.

#### ACTION NOW

The Action Now program list includes 7 parameter combinations. This mode is suggested in sport field for athletic preparation where you wish to add the muscular contraction induced by a stimulator to a work made with overloads in dynamic and isometric form.
