

# ***DST8000 Triple Pro***

## ***All-in-one physical therapy machine***

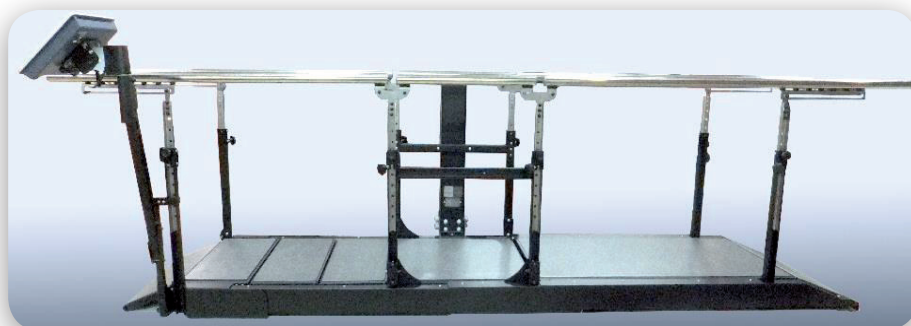

### **Versatility for Patient Empowerment**

DST8000 Triple Pro combines three devices in one, including an adjustable staircase for walking up and down steps, a walking surface inclined at different angles, and a full horizontal

parallel bar. The unit's sleek versatile design simulates everyday urban terrain – enabling patients to train and practice different slopes, stairs, and gaits without changing equipment.

***DST8000 Triple Pro*** – Intermediate position: adjustable stairs/slope

***DST8000 Triple Pro*** – horizontal position: full length parallel bar

### **Easy to Adjust and control**

With a click of a button, therapists can adjust the degree of the slope and the height of the stairs. Patients benefit from an optimal training regimen, leading to improved performance in less time and effort.

### **Empowering Medical Professionals**

DST Triple Pro integrates sensors and software that record and display patient performance. Physiotherapists and medical professionals gain valuable insight using progress charts with segmentation based

on age, pathology, treatment duration and more. The collected data can be used to support medical studies, research, as well as boost overall patient and treatment performance.

### **Progress Tracking and Display**

DST8000 Triple Pro features friendly software and user interface to manage and monitor treatments. It displays data from previous sessions to enable easy tracking of patient

progress. Clear and objective progress charts can be quickly generated for all gait training parameters. Treatment data can be downloaded or sent via email.

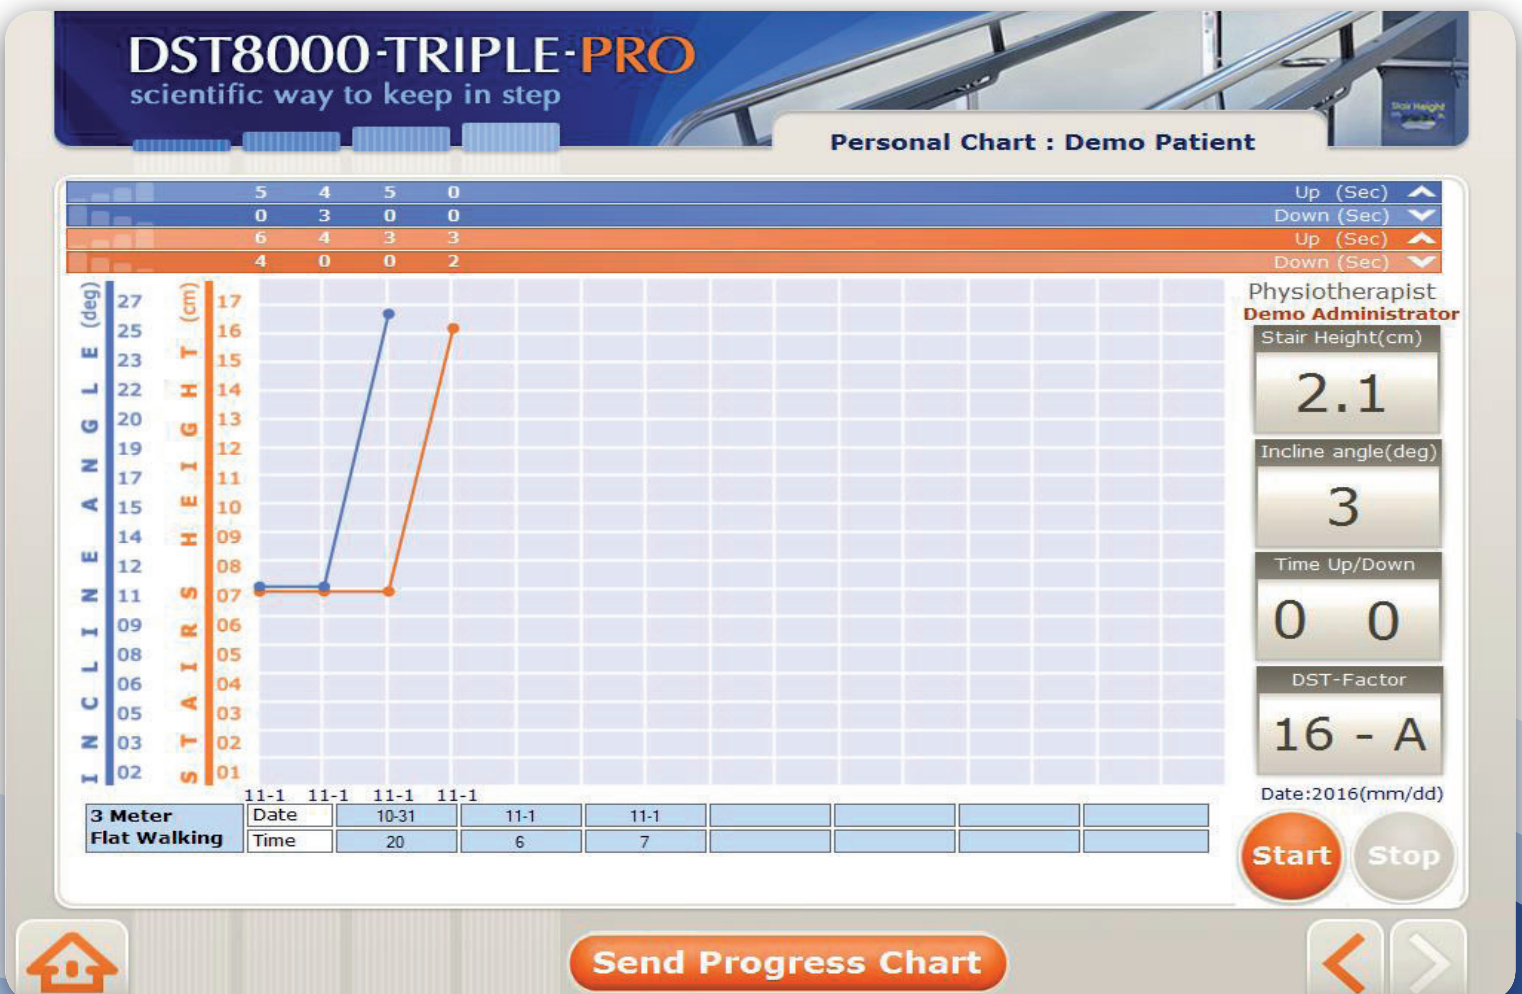

## The 3-in-1 unit measures, displays and documents all treatment sessions, including:

- Time it takes to walk across parallel bar
- Stairs height and time it takes to climb
- Slope degree and time it takes to walk

## Technical Specs

- Flat walking surface - 3 m/9.8 ft
- Handrails length - 3.6 m/11.8 ft
- Total length - 3.6 m/11.8 ft
- Total width - 1.6 m/5.2 ft
- Stairs/slope width - 65 cm/25.6 in
- Stairs height - 0 to 16.5 cm/6.5 in
- Slope angle range - 0 to 26 degrees
- Handrails height range - 65-93 cm/25.6-36.6 in
- Maximum load - 200 kg/440 lbs
- Unit weight - 270 kg/594 lbs
