

Boost 2 Microgravity Treadmills

The Boost team is made up of all former athletes with a passion for helping others perform at their full potential. With 30+ years of impact-reducing treadmill experience, we are knowledgeable and dedicated to providing not only a design that is simple, functional and affordable but a premium overall customer experience you can rely on.

The Boost is based around Differential Air Pressure (DAP) technology, originally developed by NASA and offers a motorized automatic lift system for quick entry and exit.

Elevate Performance

Negative pressure environment allows the individual to exercise without risking further damage to their bodies, which can not only speed up recovery time. By reducing the impact on muscles and joints, individuals can also regain range of motion quicker.

The Boost 2 provides a safe and supportive structure to be able to focus on having proper form during range of motion without overcompensation or falling.

Improve Balance & Coordination

Because the reduced impact on joints and muscles allows patients to exercise for longer periods, they can increase their cardiovascular endurance without risking injury.

Individuals can focus more on their movements and form while the Boost 2, allowing them to improve their balance and coordination. This is helpful for patients recovering from an injury that affects those things, or athletes who are working on those mechanics.

WHY BOOST TREADMILLS?

PRECISION HEIGHT ADJUSTMENT

The motorized height adjustment lifts precisely from 1,35 to 2,10m. With no manual lifting or guesswork involved, it makes for safe, quick and easy exit/entry.

SIMPLIFIED USER CONTROLS

No more pressing and holding buttons! The new control system is easy and intuitive, featuring knob controls that allow for quick and accurate adjusting of speed and body weight.

WOODWAY 4FRONT TREADMILL BASE

Woodway's patented Slat Belt running surface is designed with shock-absorbing technology for the most enjoyable treadmill experience, with unmatched durability.

EASY CLEANING/MAINTENANCE

Frame designed for easy access to treadmill & electronics - access the inside of the treadmill in 1 minute with simple tools to perform maintenance. Sits on 4 adjustable feet so you can clean underneath.

COMFORTABLE + DURABLE SHORTS

Made of light, thin, air-tight material. Free replacement if you feel they lasted less than expected.
